

## PRESS RELEASE

---

For Immediate Release – Tuesday 21<sup>st</sup> December

### **New Projects**

SLP Engineering is pleased to announce it has been awarded two new projects.

#### Chiswick Platform Well Desander Pre Work Engineering

In November 2010 Centrica Energy Upstream BV awarded SLP a contract to carry out the pre-work engineering of remedial works on the Chiswick Platform Gas Flowlines.

The Chiswick Platform is a Normally Unattended Installation (NUI) of the SLP Minimum Facility Platform (MFP) variant. SLP Engineering originally designed, procured, fabricated & hooked up the Chiswick Platform circa 2006.

During 2010, Centrica Energy Upstream successfully drilled two new wells on Chiswick, which were subsequently hooked up to the Platform topsides by SLP Engineering. SLP have also undertaken & completed a successful Rig Intervention visit to replace two Xmas Tree assemblies.

The latest workscope awarded to SLP comprises the pre-work engineering to disconnect one well from its current desanding configuration & hook-up to the production manifold. Another well will be disconnected from its permanent flowing configuration & hooked up to the Desander skid to perform additional well clean up.

Following Submission of the engineering deliverables SLP will actively pursue award of the following Project Phases; Procurement & Offshore Construction.

#### Thornton Bank Development

More recently SLP Engineering as part of the Smulders group has been awarded the engineering and fabrication of one of the jackets for the Thornton Bank offshore wind farm development project and as details of the project are confirmed they will be announced on this website. The recruitment process for construction labour has commenced; please refer to the employment section of this website for details of current labour trade requirements.

-Ends-
